**Hi, first of all forgive me for my absence this last week. I was very busy at work, but I'll be making a lot of changes this week.**

**There is a lot to do, so next days I'll try to work as hard as I can to make all the things are needed.**

Activity: 182

[Ignore](#)

**I'm already working in a client update to include seednode and allow USE\_UPNP so improve network's connectivity.**

**I'm also considering changin Diff retarget, since that's a major change you all will need to upgrade asap, so let me know if you think it is a good idea.**

**Please remember any contributions will be rewarded. 😊**

Good to hear from you finally.

Can you please take just 1 minute and answer my PM's?

Thanks

testing compilation of OSX wallet on mavericks 10.9 with Xcode 5.0.2, Xcode, command line tools, brew, macports etc installed.

Using source <https://github.com/grumpycoin/grumpycoin> and QT Creator 3.0.0, both Desktop QT 5.2.0 clang kit and Qt 4.8.5 causes error.

.../grumpycoin/src/qt/macdockiconhandler.mm:50: error: assigning to 'objc\_object \*' from incompatible type 'DockIconClickEventHandler \*'

```
this->m_dockIconClickEventHandler = [[DockIconClickEventHandler alloc]
initWithDockIconHandler:this];
^
```

~~~~~

using make -f makefile.osx  
causes this error

```
.../grumpycoin/src/serialize.h:824:10: error:
class member cannot be redeclared
void insert(iterator it, std::vector<char>::const_iterator first, st...
^
```

```
.../grumpycoin/src/serialize.h:811:10: note:
previous declaration is here
void insert(iterator it, const_iterator first, const_iterator last)
^
```

```
.../grumpycoin/src/serialize.h:824:10: error:
redefinition of 'insert'
void insert(iterator it, std::vector<char>::const_iterator first, st...
^
```

```
.../grumpycoin/src/serialize.h:811:10: note:
previous definition is here
void insert(iterator it, const_iterator first, const_iterator last)
```

```
adding
#if !defined(MAC_OSX) in src/serialize.h
line 811
```

```

new error:
net.d -o obj/net.o net.cpp
net.cpp:52:1: error: unknown type name 'array'
array<int, THREAD_MAX> vnThreadsRunning;
^
net.cpp:52:6: error: expected unqualified-id
array<int, THREAD_MAX> vnThreadsRunning;

adding in src/makefile.osx
# osx 10.9 has changed the stdlib default to libc++. To prevent some link error, you may need to use
libstdc++
CFLAGS += -stdlib=libstdc++

now I get lots of text, last text is this with error:

    AppInit2() in init.o
    std::__1::basic_ostringstream<char, std::__1::char_traits<char>, std::__1::allocator<char>
>::~~basic_ostringstream() in init.o
ld: symbol(s) not found for architecture x86_64
clang: error: linker command failed with exit code 1 (use -v to see invocation)

Can anybody provide some help? If I try with litecoin project and QT Creator I also get architecture
x86_64 error.

PS. the wallet new link causes virus alert and is not a new wallet according to
https://github.com/grumpycoin/grumpycoin/commit/d500adb6246f0beadbedb19b0166f42f026938cf
but I guess everything not finished yet.

```

Yes, there are compile errors. I eventually worked through them. Here is a working version of the Mac wallet. Tested on 10.7, 10.8, & 10.9. I will recompile when source code changes are implemented. For now:

### Re: [ANN][Grumpycoin][GPC] Grumpycoin Released 01/07/2014 !!!

January 31, 2014, 05:42:35 PM

#484

Not sure if it is still an issue but my wallet was able to sync no problems in less than an hour, which is pretty normal for this coin.

I can't log into the pool or reset my password, can the admin contact me?

### Re: [ANN][Grumpycoin][GPC] Grumpycoin Released 01/07/2014 !!!

People, now is time to redirect your rigs to Grumpy Coin pool. Let's have at least 100 MH/s hashpower. It is not much! It will help this coin to get going.

Hope to see another pool that Dev was talking about, too.

Name your price 😊

I am interested but I am looking to buy 1 billion GPC 😊 Preferably in one transaction or maximum few (for example 5x200M).

Who created the subreddits /r/GrumpyCoin & /r/GCMarket? They are private.. If the creator of these subs actually comes on here please PM me... would like to get those subs switched off private so we could get some reddit traffic.

edit: maybe if someone if good at coding we could set up a Grumpycoin tipbot. I have no idea how to set those tip bots, but I think tipping people on reddit is a great way to get the name of the coin out there.

I will be bringing up a pool sometime in the next few weeks, and GPC will be on that for sure. Now that I know there is an active Dev team I am going to send some of my hashrate that way!

Looking forward to it! Second pool is very needed!

Woho 😊 "2 active connections to GrumpyCoin network" but diff low again. I hoped we could break diff 1 but I guess it is not the time yet.

And please Dev update the links at grumpycoins.com website!

We really need an exchange for this coin :/

We do but hashpower is what we really need now and it is rising (now 40 MH/s+ and diff soon 1).

And as for the exchange. We need some good one like cryptsy, coinmarket.io, coinedup or coinex.pw.
